2) In the multiplication of 1st column with 1st row
For eg, $7 \times 8 = 56$.
write six in the upper slot
96 in the lower slot.

3) Similarly for the remaining numbers

4) Finally, add the numbers diagonally.

5) Use the carry forward technique.

6) That's it

Multiplication of Decimals

1) $2 \cdot 1 \times 3 \cdot 2$

Forget about the decimal.

$$
\begin{array}{r}
21 \\
\times 32 \\
\end{array}
$$

$(2\times3)\!\!\!\bigg)\!\!\!\left(2\times2 \quad 2\times1\right)$

$+$
1×3

$$6 \mid 7 \mid 2$$

$$= 672$$

Now, put the decimal point at 2 places from the right because in 2.1, there is one decimal pt & in 3.2, also there is one decimal point. So, total there are 2 decimal points

$\therefore$ Answer is : 6.72
